EDUCATION

Candidate for Bachelor of Computer Science

Graduating May 2020

University of Waterloo

Coursework: Distributed Systems, Databases, Big Data, Operating Systems, User Interfaces, Computer Security, Computer Vision, Object Oriented Programming, Artificial Intelligence

SKILLS

General: Python • C++ • Lisp • JavaScript • Java • C# • Ruby • Bash • SQL

Web Development: Angular • React • Flask • Rails • ASP.NET • JWT • GraphQL

Data: Hadoop • Spark • Keras • scikit-learn • scikit-image • Pandas • Airflow

EXPERIENCE

Credit Karma **Software Engineer Intern – Data**

Sept 2019 – Dec 2019

- Built a **hybrid recommender system** that leveraged matrix factorization and deep neural networks to improve recommendation click through rates.
- Designed and conducted experiments to determine the most optimal way to handle recommendations for newly introduced (cold-start) items.
- Built and deployed data pipelines on **Google Cloud Dataflow** using Apache **Beam** and **Airflow**.

Hashtag Paid Inc. **Software Developer Intern**

Jan 2019 – April 2019

- Designed and built an Amazon **Redshift** data warehouse to consolidate data from multiple sources, resulting in up to 9x faster queries for performance analytics. Used **Airflow** to manage data pipelines.
- Architected feature to support concurrent team users using **Ruby on Rails (w/ RSpec)**, **React** and **PostgreSQL**, leading to significant improvements in client productivity and satisfaction.
- Conducted extensive usability tests to validate workflows and interfaces.

Fast Access Blockchain **Blockchain Developer**

May 2018 – Aug 2018

- Developed client-side web wallet with an interface for decentralized app (**dApp**) creation, deployment and interaction from the ground-up using **Angular**.
- Wrote **Solidity** smart contracts to thoroughly test abstraction layers responsible for Ethereum Virtual Machine (**EVM**) integration.

Perkin Elmer Inc. **Full-Stack/ML Developer**

Sept 2017 – Dec 2017

- Used **scikit-learn** and **Keras** to build machine learning models to classify trace metals present in a solution.
- Designed and developed models for spectral simulation using **SciPy** and **NumPy**. Used models to augment datasets, improving classification accuracy by 5% while minimizing time spent on gathering data from instruments.

Red Trait Ventures **Back-End Developer**

Jan 2017 – Aug 2017

- Utilized **NLTK**, **scikit-learn** and **TensorFlow** to build classification models that automatically assigned categories to consumer complaints.
- Used **C#**, **Facebook Graph API** and **IBM Watson** to develop a feature for **ASP.NET** web application that enabled customers to consolidate reviews from their Facebook page and filter them based on sentiment.
- Built backend for a security-as-a-service web app using **Flask**, **GraphQL**, **JWT** and **Nmap**.

PROJECTS

csskrt-csskrt

Python library that minimizes development time for HTML projects by automatically adding classes for CSS frameworks such as **Bootstrap** and **Bulma**. Listed as a featured project on Bulma's GitHub.

fbIRL

Worked with a team of 3 to build an augmented reality networking application using **React Native**, **Expo**, **Flask** and **FB Graph API**. Won first place at Facebook Dev Hackathon 2019.
