EDUCATION

Bachelor of Computer Science

Graduated June 2020

University of Waterloo

Coursework: Distributed Systems, Databases, Big Data, Operating Systems, User Interfaces, Computer Security, Computer Vision, Object Oriented Programming, Artificial Intelligence

SKILLS

General: Python • JavaScript • Bash • SQL • Scheme

Databases/Infra: Elasticsearch • Kubernetes • Terraform • Postgres • Snowflake • BigQuery • MongoDB

Data Engineering: Spark • Prefect • scikit-learn • scikit-image • Pandas • Airflow

Web Development: React • FastAPI • Rails • ASP.NET • GraphQL • AWS Lambda

EXPERIENCE

Adeptmind **Senior Software Development Engineer**

January 2023 – Present

- Spearheaded the design and deployment of the company's distributed mall catalog data pipeline, defining the architectural roadmap and leading a team to build the system (**Python, Prefect, Kubernetes, MongoDB, Elasticsearch**) that processes 10M+ products daily.
- Owned **Kubernetes** deployments and CI/CD automation (**GitHub Actions, Terraform, Helm**); migrated legacy manual deployments to GitOps workflows and triaged on-call incidents to maintain high availability
- Pioneered the company's first A/B testing program with **Statsig**, running ~25 experiments per quarter and delivering insights that informed product and marketing decisions for major retail clients.

Software Development Engineer

June 2020 – Dec 2022

- Leveraged **Snowflake SQL, Google Analytics, and Adobe Analytics** to analyze large datasets and uncover insights that guided product improvements and new feature development.
- Built and deployed internal tools (**FastAPI, React, Postgres**) to streamline data labeling and mall-store management workflows, enhancing ML data quality and cross-team efficiency.
- Recognized with multiple company awards (Best Newcomer, Most Adaptable Engineer, Most Used Internal Tools) for rapid cross-functional impact.

Credit Karma **Software Engineer Intern – Data**

Sept 2019 – Dec 2019

- Built a **hybrid recommender system** that leveraged matrix factorization and deep neural networks to improve recommendation click through rates by 6% for users with prior interactions.
- Designed and conducted experiments to determine the most optimal way to handle recommendations for newly introduced (cold-start) items.
- Built and deployed data pipelines on **Google Cloud Dataflow** using Apache **Beam** and **Airflow**.

Hashtag Paid Inc. **Software Developer Intern**

Jan 2019 – April 2019

- Designed and built an Amazon **Redshift** data warehouse to consolidate data from multiple sources, resulting in up to 9x faster queries for performance analytics. Used **Airflow** to manage data pipelines.
- Architected feature to support concurrent team users using **Ruby on Rails (w/ RSpec), React** and **PostgreSQL**, leading to significant improvements in client productivity and satisfaction.

Fast Access Blockchain **Blockchain Developer**

May 2018 – Aug 2018

- Developed client-side web wallet with an interface for decentralized app (**dApp**) creation, deployment and interaction from the ground-up using **Angular**.

PROJECTS

fbIRL

Worked with a team of 3 to build an augmented reality networking application using **React Native, Expo, Flask** and **FB Graph API**. Won first place at Facebook Dev Hackathon
